

HR Shortlisting Agent

AI-Powered Intelligent Recruitment
Evaluation

PRESENTED BY RIJUL THAKUR

INTERNSHIP SUBMISSION • TASK 1

The Challenge

Recruiter Fatigue

Manually screening 500+ resumes per role leads to missed talent.

Unconscious Bias

Human screening is subject to subtle biases in decision making.

Time to Hire

Slow initial screening delays the entire hiring pipeline by weeks.

Inconsistency

Different recruiters apply different standards to the same role.

The AI Solution

Llama 3.1 Reasoning

Using 70B parameters to analyze deep context, not just keywords.

Structured Rubric

Objective scoring across 5 mandatory dimensions for every candidate.

Human Control

A "Human-in-the-loop" system for final decision overrides.

Groq Speed

Near-instant evaluation using LPU™ inference technology.

Built with Power

Streamlit Dashboard

A premium Glassmorphism UI for a seamless HR experience.

LangChain LCEL

Modular agent architecture for reliable and scalable logic.

Pydantic V2

Ensuring 100% structured data and eliminating hallucinations.

PyPDF Engine

Robust parsing of multi-page resumes and job descriptions.

Transparent Scoring

Skills Match (30%)

Direct mapping of technical competencies to JD requirements.

Experience (25%)

Evaluating seniority, domain relevance, and career progression.

Education (15%)

Academic qualifications and specialized certifications.

Portfolio (20%)

Evidence of real-world impact through projects and github links.

Human-in-the-Loop

Manual Correction System

Recruiters can override AI scores if they find nuances not caught by the model. The leaderboard re-ranks automatically based on human input.

Audit Logging

Every manual change is logged to `overrides.jsonl` with a reason and timestamp, ensuring full accountability and transparency.

Security Mitigations

Anti-Injection

Strict schema validation prevents "Ignore Instructions" attacks.

Data Privacy

No persistent storage of PII on public servers.

Determinism

Temperature=0 ensures the same resume gets the same score every time.

Key Management

Encrypted environment variables for all API interactions.
